

**LIVE A PRIVATE
LIFE ON THE WEB**

WhiteOS utilizes a custom, optimized and hardened Ubuntu environment based on the latest version 14.04 LTS. WhiteOS is secure and portable operating system that anyone with a PC or laptop will be able to use. Because the OS and Wallet data files are stored on a USB, you effectively have true cold storage, and your coins will follow you wherever you go.

BUILT IN ANONYMITY – One of the most unique features of this secure environment is that the wallet and browsers are redirected through a TOR proxy to ensure anonymity and privacy (this runs locally by default). When you unplug your USB stick no trace is left on the host PC.

3 REASONS WHY YOU SHOULD CHOOSE WHITEOS

Extremely fast

You are anonymous on the Web

**Your coins and your browser are
all in one cold storage**
